

Senior QA Engineer

We are seeking an experienced Senior Quality Assurance (QA) Software Engineer to join our team. As a Senior QA Software Engineer, you will be responsible for ensuring that our software products meet high-quality standards by developing and executing test plans, performing manual and automated testing, and identifying and reporting defects.

In this role, you will work closely with our development team to improve our software development process by identifying and resolving quality issues. Additionally, you will be responsible for maintaining our test automation infrastructure, designing and developing automated test cases, and providing guidance and leadership to other members of the QA team.

Job Responsibilities:

- Develop and execute test plans to ensure that software products meet high-quality standards.
- Perform manual and automated testing to identify defects and verify that software products meet requirements.
- Identify and report defects, and work with the development team to resolve them.
- Collaborate with the development team to improve the software development process by identifying and resolving quality issues.
- Design and develop automated test cases, and maintain our test automation infrastructure.
- Provide guidance and leadership to other members of the QA team.
- Participate in the software development process to ensure that quality is built into our products.
- Ensure that our products meet industry standards and comply with relevant regulations.

Requirements

- 5 or more years of experience in software quality assurance.
- Strong knowledge of software testing methodologies, including manual and automated testing.
- Experience with test automation frameworks and tools, such as Selenium, Appium, Cypress.
- Strong programming skills in languages such as Java, Python, or JavaScript.
- Experience with test management tools.
- Experience with agile software development methodologies.
- Experience with performance and load testing
- Experience with cloud-based testing
- Experience with security testing
- Excellent communication and teamwork skills.
- Bachelor's or Master's degree in Computer Science or a related field.
